Heating System Timberline 2.0 Diesel Hybrid Heater – All-in-One System

Timberline®

Information

Pack size	43 x 42 x 42 cm
Net weight	29.3 kg
Gross weight	30 kg
Catalogue page	541

Timberline 2.0 diesel hybrid heater for motorhomes and vans

The Timberline 2.0 is the new generation of water-based diesel hybrid heaters for motorhomes and vans. The system combines space heating and hot water preparation in a compact central unit and offers maximum comfort for year-round travel through two independent heating circuits, multiple heating zones and automatic summer/winter operation.

Thanks to intelligent energy management, a modern user interface and flexible expansion options, the Timberline 2.0 is suitable for both compact vans and large motorhomes.

Technical features:

- Combined system for space heating and hot water preparation
- Compatible with 5 kW or 10 kW compact burners
- Two independent heating circuits
- Up to five individually controllable heating zones
- Automatic summer/winter operation
- Water-based heating system for even and pleasant radiant heat
- Underfloor heating possible

Specifications

Nominal voltage 12 V

- CAN-Bus ready
- Large, modern display with intuitive operation
- Suitable for almost all motorhome and van concepts

Single module installation – easy integration

One of the biggest innovations of the Timberline 2.0 is the central single module installation of the Timberline XT module. All important main components are housed in a compact system unit, enabling significantly simplified installation.

More power for larger vehicles

By optionally using a 5 kW or 10 kW burner, the Timberline 2.0 is also suitable for larger motorhomes and demanding heating systems. The intelligent energy management ensures efficient distribution of energy between heating and hot water operation.

Flexible heating zone control

The Timberline 2.0 features up to five individually controllable heating zones for targeted heating of individual vehicle areas.

- Separate heating control per zone
- Individual temperature control for day and night operation
- Automatic or manual fan control

It is operated conveniently via the integrated touch display.

Combined diesel and electric operation

- Operation via diesel burner and integrated 230 V/1500 W electric heating element possible
- Automatic prioritisation of electric operation when connected to mains power
- With increased heat demand, the diesel burner switches on automatically, ensuring an efficient combination of diesel and electric heating

Scope of delivery (depending on variant):

- Timberline XT module
- Integrated expansion tank
- Integrated 230 V/1500 W electric heating element
- Integrated hot water heat exchanger
- Integrated level switch
- Integrated pumps for heating circuits
- Diesel pump with holder, connections and pipe
- Control panel/control unit
- 2 boosters
- Circulation pump
- System hoses including connectors and clamps

Please note: the scope of delivery may vary depending on the version and system configuration. Additional components or vehicle-specific adaptations may be required for complete installation.
