Manufacturer's no. AFP-T (DE)

Flashlight AQUA PRO

HYDRACELL
 POWERING A POSITIVE FUTURE

Information

Dimensions	27.6x6 cm
Pack size	36x11x7 cm
Net weight	500 g
Gross weight	590 g

The flashlights of the future

The LED flashlights from HydraCell are characterised by their innovative, water-activated TC energy cells and set new standards in terms of performance.

Bright and durable

The high-quality Cree LED provides bright, long-lasting illumination. Thanks to the continuously adjustable lens, you can freely choose between a sharply focused beam of light and a broadly illuminating flashlight – depending on what you need at the moment.

The impressive light output of 200 or 350 lumens ensures that you always have enough brightness – whether you are camping, hiking or in emergencies. Shockproof and splash-proof (IP65).

Cost-efficient

Thanks to the water-activated energy cells, with HydraCell flashlights you save money, as you need significantly fewer disposable batteries.

Energy anytime anywhere

In case of emergencies, you can easily dip the energy cells into a non-oil-based liquid to (re)activate them – be it rainwater, stream water, seawater or dirty water.

Specifications

Colour	black
Luminous flux	350 lm
Material	aluminium
Type	AQUA PRO

The HydraCell flashlight AQUA PRO has a luminous range of 200 m and is equipped with HydraCell TC2D energy cells with an approximate runtime of 120 hours*.

(*) occasional reactivation required
